

**ABSTRACT**

5 A double metering dispenser for hygienic substances,  
consisting of a support for a pair of flexible or  
contractile metering receptacles in divergent projection  
assembled on respective arcuate support arms and housed in a  
lower ring provided with anchoring means which firmly fix it  
to the lower end of said arms, and which furthermore has  
closure means for the outlet opening of the receptacle and,  
on the upper end, is provided with adjustment means  
10 assembled on the inside of the hood cover and inside of the  
upper end of the support arm with the possibility of opening  
vertically for releasing the receptacle retained by said  
hood cover.
